### **Highlights**

### FY23 Results

- Record highs in revenue, operating profit, and net income
- Revenue growth driven by Americas and Europe, +7% companywide (excluding exchange rate effects)
- Operating profit growth outpaced sales growth, +14% companywide (excluding exchange rate effects)

### FY24 Guidance

- Continued global growth, revenue growth +7% (excluding exchange rate effects)
- Operating profit up 16% (excluding exchange rate effects) due to expansion of highly profitable businesses

©TERUMO CORPORATION

3 / 14

These are the highlights of this year's financial statement.

In FY23, revenue, operating profit, and net income all reached record highs.

Revenue growth was +7% excluding exchange rate effects, driven by growth in the U.S. and Europe.

Operating profit growth outpaced sales growth, increasing by +14% when excluding exchange rate effects.

Net income surpassed 100 billion yen for the first time to reach 106.4 billion yen.

For FY24, we expect continued growth globally, with revenue growth of +7% excluding exchange rate effects.

Operating profit is expected to increase by +16%, excluding exchange rate effects, due to the expansion of highly profitable businesses.

### P&L

- Revenue: Record high. TIS, blood center business, Neuro, and Vascular led with double-digit growth
- Operating profit: Record high. Steady progress in profit improvement measures. SG&A expenses increased due to increased headcount to expand sales of therapeutic devices in North America

4 / 14

These are our P&L results.

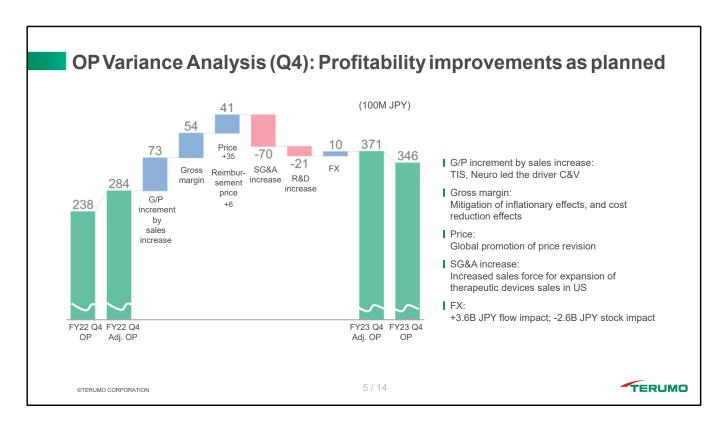

Sales revenue for the full year exceeded 920 billion yen, a record high. Cardiac & Vascular's TIS, neuro and vascular, as well as the Blood and Cell Technologies blood center business led with double-digit growth.

Operating profit also reached a record high of 140.1 billion yen.

The increase in SG&A expenses due to an increase in employee headcount to expand therapeutic devices sales in North America was more than offset by the steady progress of profit improvement measures and the revision of pricing policy.

Net income for the year reached a record high of 106.4 billion yen.

Gross margin, operating profit margin, and adjusted operating profit margin for the full year all improved from the previous year. Next slide, please.

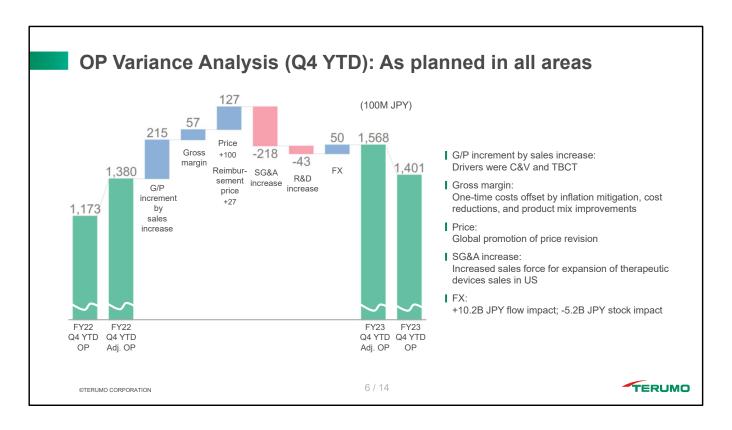

This is an analysis of the year-on-year change in for the three months of Q4.

First, the gross margin effect was due to the absence of onetime expenses in the current quarter that were recorded in the same quarter of the previous year, as well as the continued easing of inflation and the effects of cost-cutting measures that continued in Q3.

In pricing, the effect of the pricing policy review, which was expanded in the second half of the year, is being felt.

The increase in SG&A expenses is mainly due to the increase in employee headcount to expand sales of therapeutic devices such as neuro and stent grafts in North America.

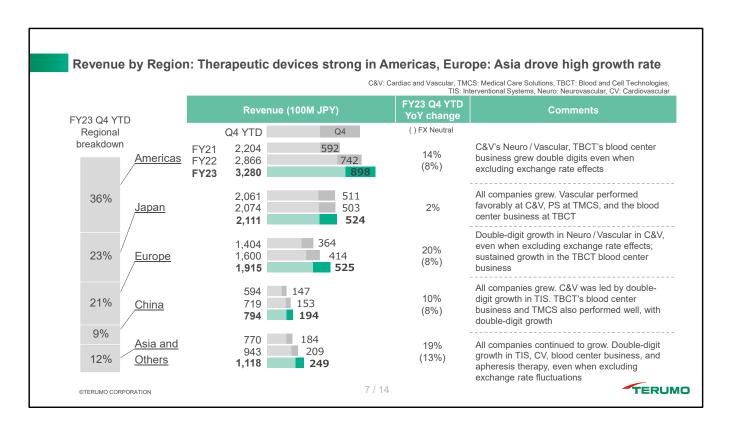

This is an analysis of change in profit for the full year.

Gross profit growth due to higher sales exceeded our expectations as a result of strong performance in Cardiac & Vascular and Blood and Cell Technologies.

The gross profit margin effect was in line with the original plan due to the progress of profit improvement measures and the effect of product mix improvement, as well as cost reduction measures and easing inflation.

Turning to increased SG&A expenses, we have increased employee headcount to expand sales of therapeutic devices in North America, which has led to sales growth.

The breakdown of "foreign exchange effects" was +10.2 billion yen in flow, and -5.2 billion yen in stock.

This is revenue by region. Overseas sales drove growth, particularly in the Americas and Europe.

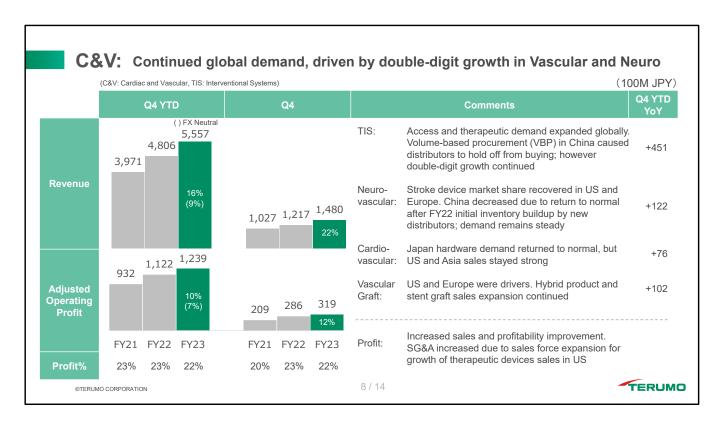

In the Americas, sales grew 8% excluding exchange rate effects due to strong sales of therapeutic devices such as neuro and vascular-related products and double-digit growth in the blood center business.

In Japan, despite negative factors such as a decrease in sales due to the divestiture of the nutrition business and a drop in demand for thermometers, sales were higher than in the previous year, driven by sales in the fields of Cardiac & Vascular and Blood and Cell Technologies.

In Europe, growth was +8% excluding exchange rate effects as a result of continued strong sales of therapeutic devices such as neuro and stent grafts.

In China, while there was some impact from restrained purchasing by distributors as access products were subject to VBP. TIS maintained double-digit growth even when excluding exchange rate effects. The new prices will not begin to apply until FY24.

Emerging economies such as Asia and the Middle East led the way in terms of growth. Growth continued in all companies, particularly in the Cardiac & Vascular's TIS and Cardiovascular businesses and in Blood and Cell Technologies' blood center business and apheresis therapy. Next slide, please.

I will next review business performance by company. First is the Cardiac & Vascular Company.

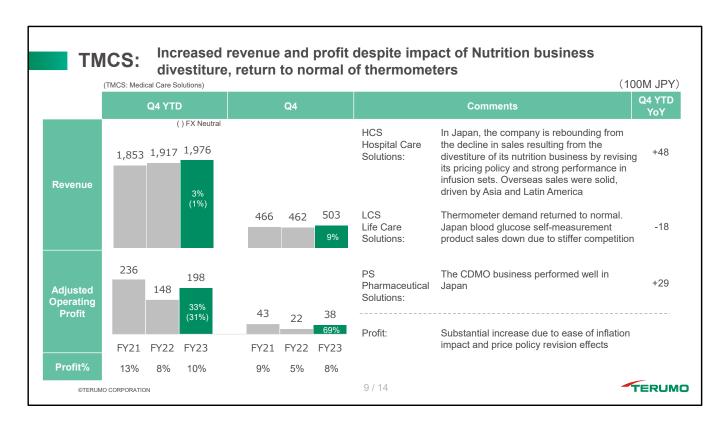

Excluding exchange rate effects, revenue grew 9%, exceeding the full-year forecast.

Its Vascular and neuro businesses performed well globally, particularly in the Americas and Europe.

Although there have been supply issues with some access products as well as the Neuro businesses' stroke device, we are steadily recovering market share.

Vascular also continues to expand sales of hybrid products and stent grafts.

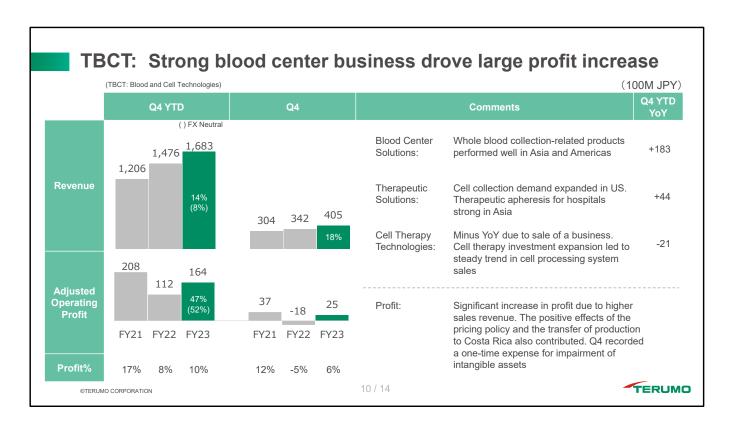

Profits increased due to higher revenues and progress with profit-improvement measures.

Next is TMCS, Terumo Medical Care Solutions.

Negative factors such as a decrease in sales due to the sale of the nutrition business and a lull in demand for thermometers were offset by the effects of revised pricing policies and the easing of inflation, resulting in an increase in sales and a significant increase in profit.

Pharmaceutical Solutions is also progressing according to plan, and the profit margin for TMCS as a whole improved by 2 percentage points.

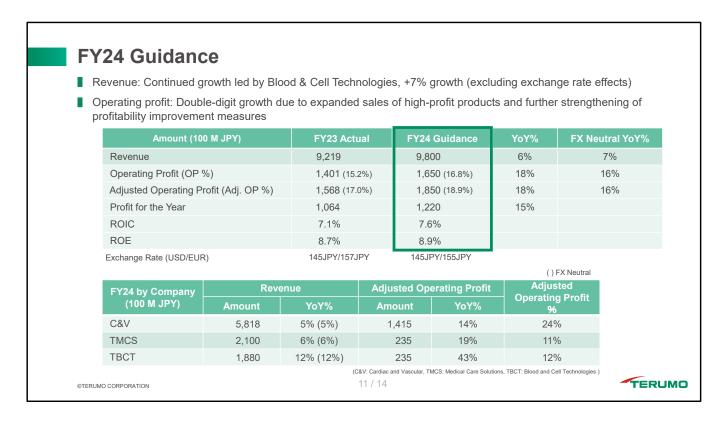

Next is TBCT, Blood and Cell Technologies.

Excluding exchange rate fluctuations, net sales increased by 8% due to the strong performance of existing businesses, especially the Blood Centers business.

Profit increased significantly as the effects of the revised pricing policy and the transfer of production to Costa Rica offset the one-time intangible asset impairment charge recorded in Q4. The profit margin also improved by 2 percentage points.

Both sales revenue and profit exceeded full-year forecasts. Next slide, please.

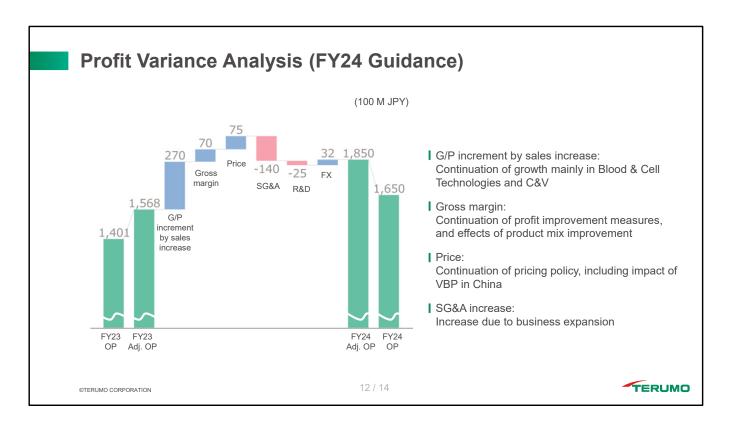

Next is the forecast for FY24.

Revenue growth is expected to continue across the company, particularly in Blood & Cell Technologies, with a forecast of +7% across the company excluding the exchange rate effects.

Operating profit is expected to grow +16% excluding exchange rate effects, significantly outpacing sales growth.

We aim to improve our operating margin by 1.6 percentage points, to 16.8%, by focusing on company-wide measures to improve profitability while steadily increasing the number of each company's high-profit growth drivers.

We will continue our efforts to improve capital efficiency. Next slide, please.

These are factors affecting profit in the FY24 forecast.

Under "Increase in gross profit due to sales growth," we expect an increase in sales at all companies, led by the Cardiac & Vascular company.

Gross margin effect includes the effect of cost reduction measures and business mix improvement, as well as the impact of inflation.

Among cost reduction measures, we will continue to optimize and improve the efficiency of our production system, and we will promote projects to further improve efficiency at the Ashitaka Plant, which serves as the backbone of TIS. Although we are making some conservative assumptions, such as high raw material prices and high electricity costs, inflation is expected to be almost flat for the full year versus FY23.

In terms of prices, we have conservatively factored in the impact of lower sales and profits from VBP in China, but we expect this to be offset by further revisions to pricing policies in existing businesses, in addition to the positive impact of price increases implemented in FY23, the effects of which will be felt in FY24.

SG&A expenses are expected to increase at a healthy rate in line with business expansion. At the same time, we will review head office expenses by promoting a company-wide cross-functional cost optimization project for support functions.

## **Assumptions Underlying FY24 Guidance**

(C&V: Cardiac and Vascular, TMCS: Medical Care Solutions, TBCT: Blood and Cell Technologies)

- Despite the impact of volume-based procurement (VBP) in China and official price revisions in Japan, this is expected to be covered by all businesses, and sales are expected to grow
- Profitability improving due to continued profit improvement measures and the effect of improved product mixes

- Despite assumptions of raw material cost increases, 6% sales growth is expected due to price actions and double-digit growths in the Pharmaceutical Solutions business
- Impacts on performance from the first overseas CDMO project (to be closed soon) and the Antibody for Alzheimer's disease are limited.

- Assumes acceleration of plasma innovation business rollout and stable growth in core business
- Profitability improvement of 2 percentage points total

©TERUMO CORPORATION

13 / 14

These are the assumptions we are making for the FY24 guidance, by company.

At Cardiac & Vascular, the impact of the decrease in sales and profit due to VBP in China and the official price revision in Japan has already been factored into the planned figures. However, this negative impact will be covered by all businesses, and sales are expected to grow for the Company as a whole. Profits are expected to grow faster than sales growth due to continued profit improvement measures and the effects of product mix improvements.

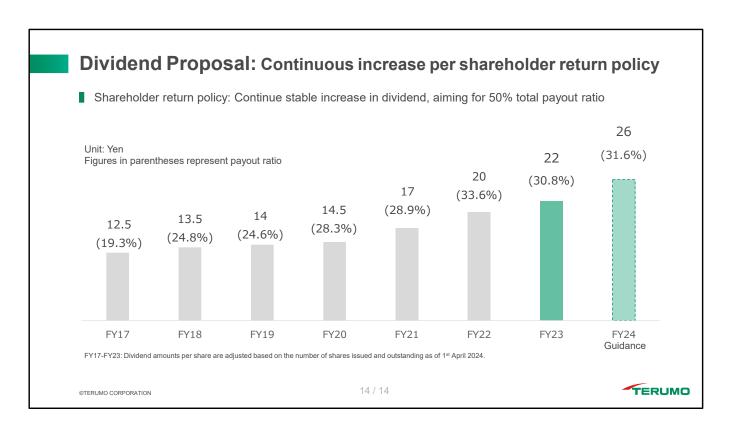

For TMCS, while we expect raw material price increases, we will bounce back from these as a result of price revisions and double-digit growth in the Pharmaceutical Solutions business, and expected to achieve +6% sales growth and further improvement in profit margins.

The first overseas CDMO project and Alzheimer's drug, both of which are slated for this fiscal year, are expected to have limited impact on FY24 results.

TBCT's losses in the Plasma Innovation business will narrow due to the accelerated rollout of Rika.

For the core business, we expect stable growth continuing on from FY23.

As a result, the Company as a whole expects to improve its profit margin by 2 percentage points.

This is the last slide.

The Company executed a 2-for-1 stock split of its common stock in April 2019 and again in April 2024. The graphs and figures on this page reflect these stock splits.

Our dividend policy will remain unchanged, and stable dividend increases will be implemented.

The annual dividend for FY23 is expected to be 22 yen per share, with a payout ratio of 30.8%.

For FY24, we expect to increase the dividend by 4 yen, to 26 yen per share, achieving a payout ratio of 31.6%.

Together with ongoing annual dividend increases, we aim to achieve a total return ratio of 50%.

This concludes my explanation. Thanks for listening.
